IT Workshop -II (CS251)

Lab Assignment : 12

Q-1) You have a text file with data corresponding to following columns:

Employee.txt	
int	id
String	name
int	salary

Do the following operations in your JSP file:

1.1 Using **Statement** object (from your Java program), create corresponding table in MySQL for the text file.

1.2 Using **PreparedStatement** object, insert data from the text file into corresponding table.

1.3 Accept an *id* from the user in a textbox as input and if the user exists then display his full record by fetching from MySQL or else show the message "User not found".
